| Blood pressure (every visit)    | Less than 130/90                         | •          |                    |                    |                    |
| Total cholesterol (yearly)      | Less than 200                            | •          |                    |                    |                    |
| LDL (bad) cholesterol (yearly)  | Less than 100                            |            |                    |                    |                    |
| HDL (good) cholesterol (yearly) | More than 60<br>to protect<br>your heart |            |                    |                    |                    |
| Triglycerides (yearly)          | Less than 150                            | •          |                    |                    |                    |
| Current weight (every visit)    |                                          | •          |                    |                    |                    |

## Signs that may mean my heart failure is getting worse

- I gain \_\_\_\_ pounds overnight or \_\_\_\_ pounds in \_\_\_\_ days. Ask your doctor when to call.
- I have shortness of breath, especially lying down or when up and around.
- I have swelling in my feet, ankles or stomach.

• I feel more tired and weak than usual.

- I feel dizzy or faint when standing up quickly.

These tips are for your information only. Don't use these tips instead of your doctor's care. Your doctor's care comes first.
