What do you think?

Beginning in March, you may be asked to complete a survey by mail or phone. We want to know how happy you are with UnitedHealthcare Community Plan. If you get a survey, please fill it out and mail it back. Your opinion helps us make the health plan better. Your answers will be private.

Healthy start

Options for seeing your PCP

Get off to a good start this year by scheduling an appointment with your primary care provider (PCP). All members of your family should see their PCP once a year for a well visit.

If you don't feel comfortable seeing your PCP in person this year, telehealth may be an option. Telehealth is a visit using a computer, tablet or phone instead of going into the provider's office. You can have a telehealth visit using audio only. But using video on your device may help you have a better appointment.

Call your PCP's office and ask if they offer telehealth services. Schedule your next in-person or telehealth visit today.

Listen to your heart

Some heart attack symptoms differ for men and women

Although heart disease is often thought of as a man’s problem, that is not the case. The leading cause of death for both men and women in the U.S. is heart disease. Heart attack is often the reason.

It’s important to know the signs and symptoms of heart attack and how they differ for men and women. Common signs and symptoms include:

- Unexplained anxiety, weakness
- Dizziness, nausea
- Pain in jaw or teeth
- Stomach pain
- Back pain
- Pain that spreads to neck
- Chest pain
- Shortness of breath
- Pain that spreads to shoulder
- Pain that spreads to arms
- Excessive sweating

- Common symptoms for women
- Common symptoms for men

Heart attack can occur at any age. But women usually have their first heart attack at a later age than men. The average age of a heart attack for women is 70. For men, it is age 66.

Heart smart. Having a healthy lifestyle can help you manage heart disease. Talk to your provider about changes you can make to reduce your risk of heart attack.

Know your flu risk

Flu season is in full swing. If you have not gotten your flu shot yet this season, it's not too late to get one. The flu shot is your best protection against the illness.

Most people who get the flu do not need medical care. But adults over age 65 and people with certain medical conditions have a higher risk for flu complications. If you are in a high-risk group and develop flu symptoms, contact your provider right away.

Common flu symptoms include:

- Fever
- Cough
- Sore throat
- Stuffy nose
- Headaches and body aches
- Feeling tired

Managing anxiety

It's natural to feel stress during a pandemic. Fears about COVID-19 and being uncertain about the future are common thoughts. These thoughts may create stress or anxiety. But remember you are not alone. Support is available and 100% covered under your plan.

If you don't feel comfortable seeing someone in person, visit myuhc.com/CommunityPlan to search for providers who offer telehealth options. Here are 2 tips that can help you deal with stress and anxiety:

- **Take a break.** Turn off the TV. Take a walk without your phone. Read a book or do another activity you enjoy. Unplugging for a few hours can reduce your stress levels and help you focus on positive thoughts.
- **Focus on your body.** Anxiety doesn't just affect your mind. It also puts stress on your body. Making healthy choices can help you feel better. Eat well-balanced meals with plenty of whole grains and vegetables. Exercise regularly. The Centers for Disease Control and Prevention recommends about 20 minutes a day of moderate-intensity activity for adults. It also suggests doing activities that strengthen muscles at least 2 days a week.

Activity zone

Time to unwind

If you're feeling stressed due to COVID-19, the Centers for Disease Control and Prevention recommends taking a break from everyday activities. Arts and crafts are a great option to de-stress. In fact, coloring — for both children and adults — has been shown to reduce stress and anxiety. Pull out some colored pencils, crayons or markers, and make this page a work of art!

COVID-19

Important Message from UnitedHealthcare on Coronavirus (COVID-19)

Your health and wellbeing is our number one priority. That's why we want to make sure you stay informed about Coronavirus (COVID-19). We're working with and following the latest information from the Centers for Disease Control and Prevention (CDC). We're also in touch with state and local public health departments. For the most up-to-date information and resources about prevention, coverage, care and support please visit UHCCommunityPlan.com/covid-19.

How can I protect myself from COVID-19?

The best way to prevent illness is to avoid being exposed to this virus. As with any potential illness, like the flu, it is important to follow good prevention practices, including:

- Hand washing with soap and water for 20 seconds or use of alcohol-based hand sanitizer with at least 60% alcohol if soap and water are not available.
- Do not touch your eyes, nose and mouth with unwashed hands.
- Try to stay away from people who might be sick.
- Do not share cups or eating utensils with people who are sick.
- Clean and disinfect often touched surfaces.
- Cover your nose and mouth with a tissue when you cough or sneeze, and then throw the tissue in the trash.
- While a flu shot does not stop COVID-19, it's still good to protect yourself against the flu. Contact your primary care provider and schedule your flu shot.

Stay informed on the latest advice:

- For the most updated information about COVID-19, visit the CDC's COVID-19 page cdc.gov/coronavirus/2019-ncov

Five steps to wash your hands the right way

Handwashing is one of the best ways to protect yourself and your family from getting sick. During the COVID-19 pandemic, keeping hands clean is especially important to help prevent the virus from spreading.

Washing your hands is easy, and it's one of the most effective ways to prevent the spread of germs. Clean hands can stop germs from spreading from one person to another and throughout an entire community—from your home and workplace to childcare facilities and hospitals.

Follow these five steps every time

1. Wet your hands with clean, running water (warm or cold), turn off the tap, and apply soap.
2. Lather your hands by rubbing them together with the soap. Lather the backs of your hands, between your fingers, and under your nails.
3. Scrub your hands for at least 20 seconds. Need a timer? Hum the “Happy Birthday” song from beginning to end twice.
4. Rinse your hands well under clean, running water.
5. Dry your hands using a clean towel or air dry them.

Learn more about regular handwashing at [cdc.gov/handwashing](https://www.cdc.gov/handwashing).

UnitedHealthcare Community Plan complies with applicable Federal civil rights laws and does not discriminate on the basis of race, color, national origin, age, disability, or sex. In other words, UnitedHealthcare Community Plan does not exclude people or treat them differently because of race, color, national origin, age, disability, or sex.
