## Healthy Heart

### What is heart disease?

Heart and blood vessel diseases make up cardiovascular disease also known as heart disease. Heart disease includes conditions that damage the heart such as:

- Coronary artery disease
- Heart attack
- Congestive heart failure
- Congenital heart disease
- Stroke

### How common is heart disease?

- Every 40 seconds someone in the U.S. dies of a stroke, heart attack or other cardiovascular disease.
- Eighty percent of all heart disease and strokes could be prevented if people exercised more, ate healthier and stopped using tobacco.
- Heart disease remains the No. 1 cause of death in the U.S. for men and women.
- Cardiovascular disease, listed as the underlying cause of death, accounts for nearly 836,000 deaths in the U.S. each year. That's about 1 of every 3 deaths in the U.S.

### Risk factors for heart disease:

- Having high blood pressure defined as having a systolic blood pressure reading between 130 and 139 mmHg or a diastolic reading between 80 and 89 mmHg.
- Having high cholesterol defined as over 200 mg/dL.
- Having diabetes.
- Being overweight defined as having a body mass index (BMI) measurement over 25.
- Your hereditary background.

### To help keep a healthier heart:

- Exercise regularly by aiming for 30 minutes of moderate physical activity on most days of the week.
- Eat a heart-healthy diet rich in whole grains, fruits and vegetables.
- Maintain a healthy weight.
- Manage your blood pressure.
- Take control of your cholesterol.
- Keep blood sugar at healthy levels.
- Don't smoke.
- Manage stress.
- Establish a relationship with a primary care physician, know your health numbers (BMI, blood pressure, cholesterol and glucose) and follow your doctor's advice.

### Heart attack warning signs:

- Chest discomfort
- Discomfort in other areas of the upper body
- Shortness of breath
- Cold sweat
- Nausea
- Light headedness

**If you, a loved one, friend or someone you witness is experiencing any of these symptoms, call 911 and get help.**
