Diagnosis Checklist
If your doctor diagnoses you with any problem, get the full facts by asking these questions:

1. Please explain my condition. How was it diagnosed?

2. What does this condition mean for my overall health?

3. Can it be treated? Does it have to be treated? What happens if I don't get it treated?

4. Should you conduct further tests to confirm the diagnosis?

5. What kinds of treatment options do I have? What are the pros and cons of each?

6. What are the benefits of seeking a second opinion?

7. How can I find out more information about this condition or disease?

8. Is there anything I can do to help control the condition?

9. Are there any clinical trials under way for this condition or disease?

Notes:
