Gonococcal ophthalmia neonatorum preventive medication

The U.S. Preventive Service Task Force recommends prophylactic ocular topical erythromycin ointment administration for all newborns to prevent gonococcal ophthalmia neonatorum. Typically this medication is administered after birth in a hospital setting and covered under the medical benefit. If the birth of a newborn occurs outside of the hospital setting, administration of this medication after birth is still recommended and may be covered under the pharmacy benefit.

This medication is typically covered at the customary cost-share amount for your plan, but it is available at $0 cost-share for newborn babies 0-1 month of age. For parents trying to get this medication before the birth of the baby, your health care provider can request to get your child's medication covered at no cost to you.

To qualify for a $0 copay, you must:

- Get a health care provider to confirm the use is to prevent gonococcal ophthalmia neonatorum in newborns

ERYTHROMYCIN OINTMENT 5MG/GM

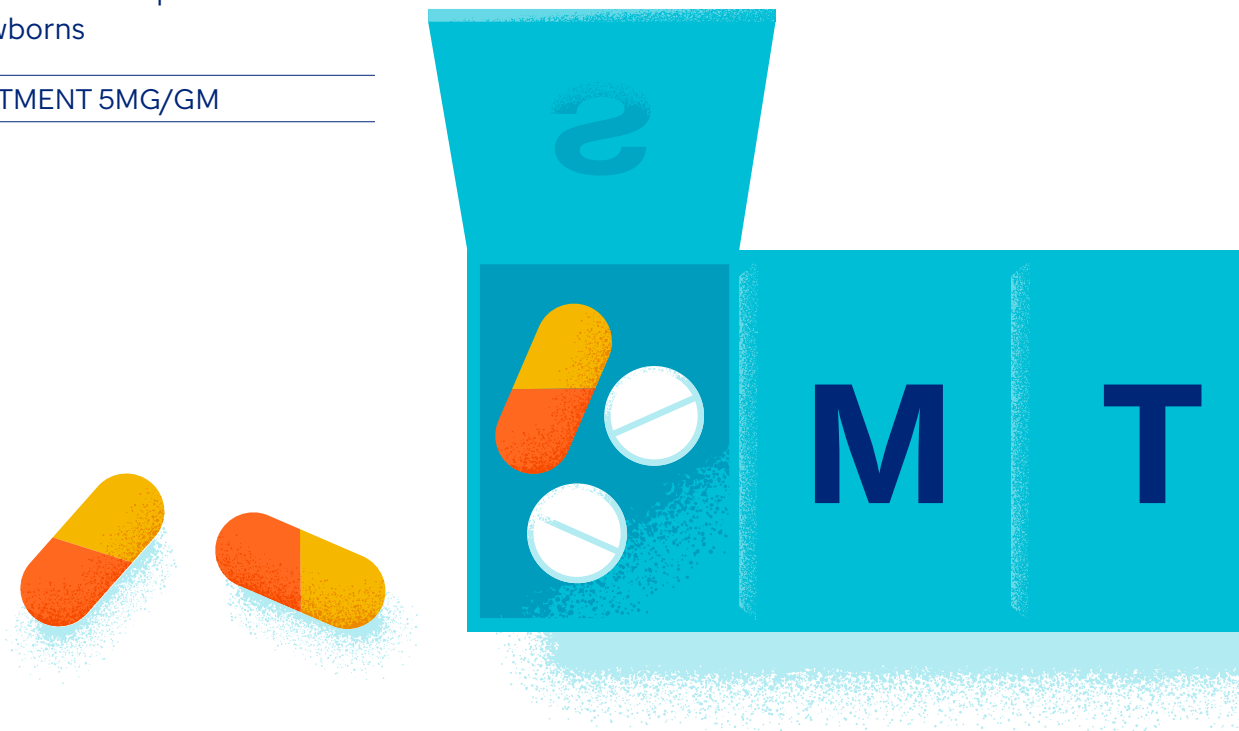

Human Immunodeficiency Virus (HIV PrEP) preventive medications

If you have a higher chance to become infected with HIV but are not yet infected, these preventive medications are available at no cost to you.

To qualify for a $0 copay, you must:

- Be at increased risk of HIV infection, and
- Use this medication to prevent HIV infection as preexposure prophylaxis (PrEP).
