Bringing you access to quality, lower priced care.

Finding a health plan that gives employers and employees access to quality care at a lower price can be tough. But UnitedHealthcare makes it easier for you — and your budget. To maximize your employees’ health benefits, we’ve teamed up with Arizona Care Network (ACN) and designed UnitedHealthcare Navigate® plans — plans that put employers and employees at the center of a coordinated care experience.

This alliance provides Navigate members with a network of more than 4,000 local physicians and facilities through Abrazo Community Health Network, Dignity Health and Phoenix Children’s Care Network. These leading health care organizations are known for delivering care and service in more than 1,000 Arizona locations throughout the Valley — making it convenient for members to get quality care close to where they live and work.

Innovation that puts you at the center.

Navigate plans are a suite of health insurance products built around the idea that patient-centered care — where a provider works closely with a patient, coordinating care with a team of other physicians and specialists — helps people live healthier lives and lowers costs.

Each plan design option requires members to select a primary care provider (PCP) who will manage the member’s overall health care and, when necessary, make referrals for specialist services. All plans cover an array of services including preventive care and health and wellness programs, such as an online health assessment and coaching.
Enhancing the member experience.

ACN’s member-focused, doctor-driven approach combines a variety of tools that help to enhance the member experience, improve health care efficiency and reduce costs, by:

- Driving members to ACN physicians who have been recognized for helping to improve patient outcomes and helping them stay healthy.
- Involving a skilled team of pharmacists, nurses and social workers helping to ensure that members with chronic conditions are guided through the health care system with one-on-one communication.
- Using technology to assist physicians in identifying members at risk so they can better manage health behaviors.
- Using innovative care management programs to streamline delivery of care for members with complex health care needs.
- Taking a holistic approach to members’ health using behavioral health programs and community resource assistance.
- Providing an after-hours and weekend nurse triage line to assist members with health care questions when their physician isn’t accessible.
