Health Plans
Navigate featuring Arizona Care Network

Working together to create a better health care experience in your community.

Helping bring you access to lower-priced quality care.
Finding a health plan that gives employers and employees access to quality care at a lower price can be tough. But UnitedHealthcare helps make it easier for you—and your budget. To maximize your employees’ health benefits, we’ve teamed up with Arizona Care Network (ACN) and designed UnitedHealthcare Navigate® plans—plans that put employers and employees at the center of a coordinated care experience.

This alliance provides Navigate members with a network of more than 5,500 local physicians and facilities through Abrazo Community Health Network, Dignity Health and Phoenix Children’s Care Network. These leading health care organizations¹ are known for delivering care and service in more than 1,800 Arizona locations throughout the Valley—helping make it convenient for members to get quality care close to where they live and work.

Collaboration that puts you at the center.
Navigate plans are a collection of health insurance products built around the idea that patient-centered care—where a provider works closely with a patient, coordinating care with a team of other physicians and specialists—helps people live healthier lives at lower costs.

Each plan design option requires members to select a primary care physician (PCP) who will manage the member’s overall health care and, when necessary, make referrals for specialist services. All plans cover an array of services, including preventive care and health and wellness programs, such as online health assessment and coaching.

CONTINUED
Enhancing the member experience.

ACN's member-focused, doctor-driven approach combines a variety of tools that are designed to help enhance the member experience, improve health care efficiency and reduce costs by:

- Driving members to ACN physicians who have been recognized for helping to improve patient outcomes and helping them stay healthier.
- Involving a skilled team of pharmacists, nurses and social workers; helping to ensure that members with chronic conditions have personalized guidance and one-on-one communication.
- Using technology to assist physicians in helping identify members at risk so they can better manage health behaviors.
- Using innovative care management programs to help streamline delivery of care for members with complex health care needs.
- Taking a holistic approach to members’ health by using behavioral health programs and community resource assistance.
- Providing an after-hours and weekend nurse triage line to assist members with health care questions when their physician isn’t accessible.
